(2) For sketch of antenna, see Annex. Antennas which wer: previously observed on type-27 planes extended from a mast just aft of the cockpit to the upper third of the rudder assembly. Further information is required to determine whether the antenna system shown on the sketch is that of the type-30 plane.

(3) The reported number of aircraft agrees with previous observations

25X1

(3)

The observed progress in training with jet bombers appears credible.

This type of antenna under the fuselage is reported for the first time. So far it has not been proved that the device which projects beyond the underside of the fuselage by 60 to 70 cm, is actually an antenna rod.

(5) Finstervalde is occupied by the headquarters of the division to which the regiment in Cottbus is assigned. This accounts for traffic between the two localities. It is possible that theoretical instruction is given in Finstervalde for the crews of all units of the division.
